

# What is the Coronavirus?

When people have the  
Coronavirus they may have:

- A cough
- A fever
- A runny nose

Most people that have the Coronavirus will just need to rest and stay at home until they feel better.

A few people will need extra help to get better and will need to stay in hospital.

The best thing I can do to stop the Coronavirus germs from spreading is something very easy.

I need to wash my hands with soap and water. Making sure I wash between my fingers.

If I can't find soap then I can use a hand sanitiser.

I know I will be safe and so will my family and friends.

I do not need to worry or feel afraid.

I will be happy at home with my family.

We can look after each other and have lots of fun.
